

What's going on along Van Buren and 164th Streets?

The City of Wyoming is installing a new water transmission main to their New Holland St. Facility. The work is scheduled to begin this fall, and extend through fall of 2026.

A few frequently asked questions:

Q: Does this mean I can get hooked up to city water if it goes past my property?

A: No, this is a transmission main, and is meant to carry water at higher pressures than the standard pressure for a home or business. There are valve chambers which could facilitate future extension of water into the township, but that is not planned at this time.

Q: Will I be able to access my home?

A: Yes, roads would be closed to thru-traffic, but available for residents along the route.

Q: Will this work impede first responder and emergency access

A: No, roads will always be available for emergency vehicles 24/7

Q: Will we be notified if my road is going to be closed?

A: Yes, there will be a 48 hour notice for all road closures.

Q: Will my water well be affected by the dewatering required for the project?

A: While we can't speak to every situation, City of Wyoming is providing the performance testing for the wells that the engineer's hydraulic analysis identified to have potential impact from dewatering. They are also providing support services for locations that experience disruption as a result of the construction process, and contingencies are in place if a disruption is experienced.

Q: Where can I find more information about the project, and its progress?

A: The engineering firm has a weekly update website where you can access up to the date

information on the project. <https://www.preinnewhof.com/wyoming-third-transmission-main/>
